

New Faces in the Iron Road Office

With its many unique aspects and innovative design, the Central Eyre Iron Project (CEIP) has attracted the interest of several academics and students alike. The Adelaide Iron Road office is currently hosting two engineering students who are not only contributing to the CEIP team, but gaining practical experience which is a prerequisite to graduate.

Sarah McCarthy is working with the Iron Road team part-time while she studies a Bachelor of Chemical Engineering and Arts (majoring in geography, environmental management and economics) at the University of Adelaide.

With her interest in both process and the environment, Sarah is working on improving efficiencies in water usage in the proposed operation, as well as the removal of salt from the saline bore water.

Ray (Yingrui) Sun, a recent Mining Engineering graduate from University of Adelaide, will spend three months with Iron Road. Ray is working on a number of mining related projects and learning how mine design works in the Australian context.

CEIP Approvals Update

As many people will be aware, Iron Road formally submitted application documents to the SA Government for the CEIP mine and infrastructure on 5 November 2015.

Please check local papers and the following website for information on government-led public consultation, how to make a submission and other details.

Thank You & Best Wishes

We would like to take the opportunity to wish everyone a wonderful Christmas and a safe, prosperous New Year. Iron Road thanks everyone who has been involved in the CEIP for their valued contribution and we look forward to another positive year in 2016 working with various communities.

Please note that Iron Road's Adelaide office will be closed from 24 December 2015 to 4 January 2016. For any urgent enquiries during this period, please use our 24 hour community line, 1800 176 008.
